

DECODE FINAL CONFERENCE: ABSTRACT

RELATORE	<i>Teresa Romeu and Marc Romero</i> , Professors of the area of Digital Competences in the Studies of Psychology and Education Science Universitat Oberta de Catalunya
TITOLO	Online training model on Digital Competence for in-service teachers and analysis of the Catalan training
ABSTRACT	<p> Considering the need of teachers' training in Digital Competence to adequately integrate ICT in their teaching practices, a training model was designed in the framework of the DECODE project. This model aims to train in-service teachers in the integration of teachers' digital competence in their professional practice. The model was designed to be carried out fully online and the participants collaboratively designed a learning situation in which their students acquire digital competence through the use of ICT. Even though this model has been implemented in 5 countries (Italy, Romania, UK, Finland and Spain -Catalonia-), the speech will focus on the Catalan results. </p>
